Ever went to a cardiac arrest where you seemed to be stuck? Your patient is still in VF after adrenaline, amiodarone,... Should I try DSED? Should I administer other drugs? The SPEAR Course will offer you the insights, skills and knowledge to better treat this patient. Originally taught by Dr. Barratt and Dr. Rees within the East Anglian Air Ambulance, this course now crossed the Channel and is hosted by EMTACCS in the BeNeLux area. This intense 2-day course, recognized by EVTm, is a mixture of lectures, workshops and a lot of group discussions with our faculty on the most innovative concepts for cardiac resuscitation.
